

Table 2. The main population genetic parameters for studied groups of wisent (*Bison bonasus*), based on 10 STR markers

Pop*	n	Ho	He	UHe	F_{IS}	Ar
PTZ	18	0,244±0,060	0,293±0,070	0,302±0,072	0,135	2,270±0,302
OKZ	7	0,343±0,105	0,276±0,082	0,297±0,088	-0,259	1,800±0,249
In total**	26	0,262±0,066	0,293±0,073	0,298±0,075	0,091	2,141±0,271

Note: Ho – observed heterozygosity, He – expected heterozygosity, UHe – unbiased expected heterozygosity, F_{IS} – inbreeding coefficient, Ar – allelic richness; * since one individual represented the KCH group, its genetic diversity indicators were not calculated; ** the numbers are given for the entire sample, including the KCH individual.
